

## Izmir Bus Terminal, Turkey

The new bus terminal in Izmir makes longer waiting periods as comfortable as possible for its guests: numerous possibilities for shopping and leisure can be found in the building. And in front of the premises, an unusual Textile Roof Construction with a covered area of nearly 6.000 m<sup>2</sup> provides protection: on 22 m high supports, a total of 26 funnel-shaped umbrella roofs with outer dimensions of 15 m by 15 m roof the bus terminal. Compared to the initially planned concrete design, the new roof is a more aesthetic and cost-efficient alternative.

### Project data Busbahnhof Izmir, Türkei

Architekt / Architect	Merih Karaaslan Ilker Aksu
Konstruktion / Construction	IF, Reichenau
Statik / Statical Calculation	IF, Reichenau
ÜGF / Covered Area	ca. 6.000 m <sup>2</sup>
Baujahr / Year of Construction	1998
