

Bus Station, Wittenberg

The textile roofing, which covers a total surface of approx. 2,400 sq.m of the bus station in Wittenberg, impressively demonstrates how waiting zones can be changed into architectural eye-catching spaces. The construction with pendulously supported peripheral columns creates a spatial aesthetic by using smooth lines and a translucent lightness, which offers even more weather protection than necessary.

Project data

Architekt / Architect	DE Consult, Dresden
Konstruktion / Construction	Ingenieurbüro Teschner, Füsing
Statik / Statical Calculation	DE Consult, Dresden
ÜGF / Covered Area	2.400 m ²
Baujahr / Year of Construction	1998
