

E-Plan - Hannover-Messe Industrie 2006

Production of four columns, covered with CENO Style Ultra stretch fabric. The columns are used as information portals within a wooden ring structure in the lower area. The diameter of the rings is 2140 mm each, reduced to 1200 mm due to the formed blank. The overall height is 6.50 m. The stretch column with different, staggered ellipse radii is doubtlessly the highlight of this order. The different blanks for the shape generation had to be matched precisely since there are no struts the material could "lean against".

General contractor	EPLAN Software und Service
Principal / client	Display Messebau GmbH, Essen
Planning	Display Messebau GmbH, Essen Blanks/manufacture: CENO
Material	CENO Style Ultra Stretch CENO Style 4-channel profile ø50mm
Description of the bearing structure	Suspended stretch columns, lower ring construction, anchored in the stand support floor
Year of Construction	2006
