

Mercedes Benz at European Motorshow, Bruxelles 2006

Production and installation of a textile wall with printed banner elements in front of it.

The banners were approximately 140 m long. The coupling of the \varnothing 30mm 3-channel profile with a stand-alone support construction made it possible to create space for the backlighting of the banners. The screening of the hollow body at the top and front sides was realised by a screening fabric guided in the upper groove.

Place of installation	European Motorshow Bruxelles Stand Daimler Chrysler
Principal / client	Ambrosius Messebau
