

Wincor World 2007

Production and installation of the complete textile structure for the in-house exhibition at Wincor Nixdorf GmbH in Paderborn, Germany.

Thanks to the conversion of the "Welle-Halle" the scope for designing was even wider than the year before in order to present the vast range of products in the banking, retail and catering sectors.

Apart from textile cladding with various, partly printed fabric materials, the newly designed catering area with its string curtain elements was a real eye catcher. Various freeform structures and CENO stretch area panels were used as additional elements of decoration.
