

Schulz Car Dealers Buildings

5 roofs - 3 locations - 1 membrane structure

Weather protection for new and used cars at three locations of the Schulz car dealers in Northern Germany. While a single huge "umbrella" with a diameter of close to 24 metres offers sufficient protection in Sittensen, two high-point structures were combined to a roofed surface of 160 squ.m. in Zeven and Rotenburg and the pylons were put at an angle away from each other.
