

Grandstand roofing, "Estadio Olimpico", Sevilla, Spain

The World Athletics Championships `99 were the premiere event for this impressive stadium: for the roofing of the grandstand, a total of 44 membrane panels with a surface of 700 m² each were mounted in an edge-collar-rope structure. The design which is reminiscent of patio architecture projects freely 40 m towards the inside above the grandstand galleries – there is seating for 60.000 spectators under this roofing.

Project data Tribünendach "Estadio Olimpico", Sevilla, Spanien
