

## Velux-Lounge on the "Medienbunker" in Hamburg

At the football world championship, the so-called Velux-Lounge was temporarily constructed on the Medienbunker in Hamburg. In contrast to the heavy, massive concrete of the Medienbunker, a light, elegant tent construction was superimposed at a dizzy height of 40 metres. Two hinged central poles support the 378 m<sup>2</sup> tent membrane. The poles and the membrane are given their required stability and tension via traction cables and compression bars. The wall construction of the lounge consists of 2.2 m high plexiglass discs, a textile skirt above the window surfaces forming the connection to the membrane roof.

### project data

Bauherr / Pricipal	Faktor 3 AG, Hamburg
Architekt / Architect	Ostermann Architekten, Hamburg
Statik Zelt / Statics Tent	Ing.-Büro Teschner GmbH, Kosel
ÜGF / Covered Area	378 qm
Baujahr / Year of Construction	2006
