

Wincor World 2006

Production and installation of all textile structures for Wincor World 2006.

This year, three blown ring structures made of CENO Style Opticlear with the upper ending consisting of CENO Style Ultra Stretch, are the central eye catchers. The pneumatic structure is carried out horizontally in a multi-chamber system, partly both welded and sewn. Apart from this, a tunnel clad with CENO Style Opera foil assumes the function of the entrance. At the same time, approximately 1.000 m² of ceiling coverings, all textile wall claddings, foil walls, lamp shades and cloth blinds have to be realised.

Place of installation	Wincor World 2006
Principal / client	Wincor Nixdorf International GmbH, Paderborn
